Consultation for Flu-like Symptoms

---

## - \*\*Description\*\*

The patient presented with complaints of feeling unwell for the past few days, accompanied by a sore throat. They reported a mild cough, no difficulty breathing, body aches, and fatigue. The patient denied recent travel or contact with sick individuals.

---

## - \*\*Medical Conditions\*\*

Viral Infection

---

## - \*\*Results\*\*: \* Mild fever (104 degrees - \*Note

there's a typo in the original text saying "14", which is impossible for a body temperature. I am assuming it is 104, which makes a case for fever. •)

- Redness in the throat.

---

## - \*\*Overall Summary\*\*

The doctor assessed the patient's symptoms and physical findings (mild fever, throat redness) and concluded that the patient likely has a viral infection. Symptomatic treatment with paracetamol and lozenges was recommended, along with advice on hydration and rest.
